

Enhancing Brand & History

Energy Company Control Centers

In 2023, this Florida energy company completed its 1,000–employee office center in Palm Beach Gardens, Florida.

Bluewater Studio was selected to work with Perkins&Will Branded Environments to produce and install 250 feet of dimensional, branded art elements located in three different areas in this state-of-the-art facility. This project comes after another successful collaboration with the team for the office center’s lobby.

The design exquisitely presents the brand, history, and mission of three major Control Centers located in this facility and their role in responding to natural disasters, power outages, and public safety.

Bluewater Studio executed and installed a dimensional sawtooth wave wall design and circular signage which complements the facility architecture and enhances each Control Center corridor.

Our team used thoughtful materials, custom-formed sheet metal, structural mounting systems, and meticulously printed and applied over 2000 square feet of gradient imagery on PVC-free optical clear film. Every detail, color, sample, and fit-and-finish was considered to produce an impactful design.
